WMF 9000 F

The powerful solution for filtered coffee on a grand scale.

The new WMF 9000 F automatic filter coffee machine ensures first-class moments of pleasure for the mass catering sector. Despite its slim dimensions, the powerhouse impresses with an output of up to 100 litres per hour, and the boiler also guarantees that coffee lovers never have to wait long for their beverages. With the option of two different types of coffee and the choice of different brewing batches on the quantity brewing arm or the pot brewing arm, the new WMF 9000 F provides a flexible response to all requirements in every field. For dispensing smaller amounts of hot water, users will find the spout directly below the generous 10-inch touch display.

Highlights

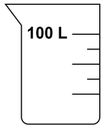
- A Granulate dispenser
- B 10-inch multimedia touch display
- C Hot water dispensing
- D Ground coffee hopper for up to two coffee types
- E Quantity brewing arm
- F Pot brewing arm for pots up to 2.8 litres

WMF 9000 F

The most important features at a glance.

100 litres of the finest filter coffee at the touch of a button

Designed to meet the special requirements of mass catering, the WMF 9000 F fully automatic filter coffee machine does more than just meet cravings for great coffee. Thanks to its intelligent quantity brewing process, it delivers individual brewing batches from 1 to 100 litres of coffee. And all this with maximum convenience, thanks to warmers with automatic post-brewing function.



Automatic cleaning granulate dosing

With the newly developed cleaning granulate dispenser, the entire cleaning process is carried out efficiently and with almost no manual intervention.

Strong brewer, strong performance

The large capacity of the brewing chamber with up to 200 grams does more than simply ensure top performance. A modified design also guarantees convenient access to all service parts.

Efficient grounds disposal

Depending on the place of use, the coffee grounds are disposed of following the principle of wet disposal, either directly into the drain or in a grounds separator provided discretely under the counter.

Two coffee types for twice the taste

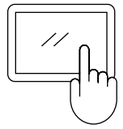
Individual tastes vary, even with filter coffee. For this reason, the ground coffee portioner offers the opportunity to use two different coffee types – such as decaffeinated and regular ground coffee. If the user only uses one type, however, the fully automatic machine offers twice the capacity, especially at peak times.

Hot water in small quantities

Tea enthusiasts will also get their money's worth with the WMF 9000 F. Positioned directly underneath the front panel, the fully automatic machine offers an individually adjustable hot water dispensing, even for small quantities.

Everything always available at a glance

The 10-inch multimedia touch display leaves nothing to be desired in terms of usability. Users navigate completely intuitively through the logically structured menu, with large product buttons making daily operations a breeze. A toolbar also gives access to all important preset customisation options.



Intelligent diagnostic tools

WMF service technicians have everything at their fingertips. Nonetheless, the WMF 9000 F offers an improved diagnostic tool for fast checking of central brewing parameters and troubleshooting.

Fully automatic system cleaning

As with all WMF coffee machines, the cleaning processes of the new automatic filter coffee machine are automatic, efficient and, above all, HACCP-compliant. For high levels of user convenience, the touch display of the quantity brewing unit can be temporarily switched off or locked to facilitate cleaning without malfunctions.

Safety is important

To ensure that the ground coffee hoppers on the WMF 9000 F safely store their precious goods, they can be locked. The same access protection is provided by the lockable front panel.

HACCP report always accessible

The reports documenting compliance with the cleaning and documentation requirements of HACCP regulations can be downloaded via USB.

Open to everyone

Protection of investment has top priority at WMF. That's why the WMF 9000 F fully automatic filter coffee machine can be used with a wide range of warmers via an adapter.

WMF 9000 F

Coffee enjoyment from small to large: WMF 9000 F offers brewing batches from 1 to 5 litres.

The brewing process of the WMF 9000 F allows the setting of individual brewing batches from 1 to 5 litres.

Users can choose between coffee preparation via the quantity brewing arm or the pot brewing arm.

A During preparation via the quantity brewing arm, an optimised brewing process achieves a consistent coffee concentration in high quality and with a very fast preparation time.

With a maximum brewing quantity of 40 litres and a post-brewing quantity of up to 100 litres, this brewing process is particularly suitable for establishments with a high coffee requirement.

B During preparation via the pot brewing arm, the coffee flowing out of the brewer is filled directly into a positioned pot of up to 2.8 litres capacity. There is also the option to use the smart brewing process to ensure optimum usage of the coffee grounds by selecting a longer contact time. With this smart variant, consistently high coffee quality is guaranteed at all times.

Both brewing processes: the quantity brewing arm and the pot brewing arm, are included with the machine as standard.
